

FOR IMMEDIATE RELEASE:

## **EMS eSchedule Launches Enhanced Website**

Rochester, NY, June 8, 2011 — EMS eSchedule, a leader in online crew scheduling & workforce management software, announced today that it has launched a new, enhanced website to the public. The site, [www.emseschedule.com](http://www.emseschedule.com), is more robust than prior versions and includes more information about the company's product offerings, features, and benefits.

"Our website had been lagging behind compared to the many great new features in our product line," says Dave Falcone, President of EMS eSchedule. "We spent a lot of time reviewing all the features of our software and making sure the new website reflects all the latest functionality we've added over the past few years. We've grown immensely – from online scheduling application to an entire suite of powerful 'modules' that can truly help EMS & fire agencies improve the efficiency of their operation."

EMS eSchedule differs compared to many other scheduling applications in the market in that it takes a consultative approach to each agency's unique needs. "We are not cookie cutter. Many of our customers request specific logic, functionality or reports and in most cases, we are able to accommodate them. I feel this a big differentiator for us," says Falcone.

The company offers free agency analysis, online demonstrations and evaluation versions of its software to any EMS or fire agency that may be interested in benefiting from the latest enhancements.

EMS eSchedule offers web-based personnel & agency management software for EMS, fire and other related industries (Ambulance, Advanced Life Support, Fire, Helicopter/Air Medical Transport, etc.). Functionality includes scheduling, time clock, attendance and payroll integration, shift availability, training & certification tracking and much more. The company has been in business since 2004 and steadily growing ever since, serving agencies across the United States.
